

SterileFLAT®

Antibacterial Medical Keyboards & Mice

**ANTIBACTERIAL
BACKLIT
MEDICAL
KEYBOARD**

Reduce Cross Infections by upgrading to the SterileFLAT Antibacterial Backlit Medical Keyboard – SF17-02-BL

SterileFLAT Antibacterial Backlit Medical Keyboards are an invaluable tool in reducing the risk of cross infection in any medical environment.

Shared keyboards on the wards or other clinical environments can become potential breeding grounds for Healthcare associated infections (HAI). Infections that are acquired in hospitals or as a result of healthcare interventions.

SterileFlat Keyboards offer a conventional style keyboard with Nano Silver impregnated antibacterial silicone latex free membrane barrier which can be used in all areas of clinical and medical environments.

They can be regularly washed with a recognised antibacterial or alcohol based cleaning agent every day, thus reducing the spread of MRSA, C. dif, Norovirus, E. coli, Salmonella and Airborne Viruses. Find out more at www.sterileflat.com

Key features/benefits of the SterileFLAT Keyboard:

- Conventional style keyboard with optional three level (blue) backlit feature.
- Can be cleaned with Antibacterial and Alcohol based agents or Chlor-clean a chlorine based agent as used in many Hospitals.
